Wombat Burrows · Questions 1–6

Wombat Burrows

Wombats live in woodland slopes. They are well suited to this place, but they still need food, water and shelter to survive. Conditions can change across the day and through the seasons, so safe resting places are important.

Their strong shoulders and digging claws help them build cool underground shelters. This adaptation makes everyday tasks easier and can also help them avoid danger. Young animals learn where to feed and shelter by following adults or responding to their surroundings.

They feed on grasses and roots. As they move through their habitat, they also become part of a larger food web that connects plants and animals. Changes to one part of this web can affect many other living things.

One challenge is blocked burrow entrances. People can help by leaving known burrows clear, observing wildlife from a distance and leaving natural shelters undisturbed. Small, repeated actions can protect the habitat without preventing people from learning about it.

The Stone with a Warm Centre · Questions 13–18

The Stone with a Warm Centre

Arlo was helping to tidy a creek crossing when arlo noticed a smooth black stone. It looked ordinary at first, but a tiny mark on its side seemed freshly scratched. Dust lay everywhere except beneath the object, as though it had recently been moved.

As soon as Arlo picked it up, the stone stayed warm after sunset. Arlo hesitated. The discovery was exciting, yet it might belong to someone else or be too delicate to handle alone. A hurried choice could damage both the object and the clues around it.

Instead of rushing ahead, Arlo showed it to the park ranger and marked its location. Each new clue matched something already visible in a creek crossing, so the search became careful rather than wild. Arlo paused after every step to record what had changed.

At last, the ranger explained it covered a tiny natural warm spring. Arlo wrote a short note explaining where the object had been found and what had happened. The note included the order of the clues so another person could check the discovery.

By the end of the afternoon, the discovery had become part of the place's story. Arlo was proud, not because the object was valuable, but because patience and careful thinking had protected it. The adults agreed that the object should stay with a clear label for future visitors.
