Why a toy boat slows down · Questions 1–6

A force is a push or a pull. When a moving toy boat touches a surface, friction acts in the opposite direction to its movement. Friction makes the toy boat slow down. A smooth surface such as vinyl usually creates less friction than felt. With very little friction, an object travels farther before stopping. The amount of friction also depends on how firmly two surfaces press together. Friction is useful too: it helps shoes grip the ground and bicycle brakes stop wheels. Without enough friction, people could slip and tyres could slide. Too much friction can be unhelpful because moving parts may heat up or wear away, so machines sometimes use oil to reduce it.

1 *Why a toy boat slows down:* What makes the moving toy boat slow down?

- A** sound pushing it forward **B** friction acting against its movement
C gravity pulling it sideways **D** light warming the surface

2 *Why a toy boat slows down:* What would most likely happen if there were very little friction?

- A** The toy boat would travel farther before stopping. **B** The toy boat would become heavier.
C The toy boat would change colour. **D** The toy boat would stop at once.

3 *Why a toy boat slows down:* Mark each statement True or False.

5 *Why a toy boat slows down:* Which diagram shows the applied force and friction acting in opposite directions?

- 1 The text explains how friction changes movement.
 2 The text gives examples of useful friction.

Review: *Remarkable Reptiles* · Questions 30–34

Remarkable Reptiles by Ella James

This information book contains surprising facts, labelled pictures and short explanations. Its chapters move from simple examples to less familiar ones. The opening chapter gives readers enough background to understand the later examples. The captions make the pictures easy to understand, and small fact boxes add details without interrupting the main explanation. The index is useful for finding a topic again. Some pages use words that younger readers may need to look up, and the final chapter feels too short. Even so, curious readers will probably return to the pictures and facts more than once.
